TOTAL WOOD PRESERVATIVE

COMPANION PRODUCT SERIES

Make REFINISHING & RESTORING Your Exterior Wood EASY!

# Make **REFINISHING & RESTORING** Your Exterior Wood **EASY!**

The TWP® Companion product series will help you bring your exterior wood back to life!

Weather and time can make wood look dingy and gray well before its replacement time. The TWP® Companion Product Series removes that grunge and film to bring your wood back to looking like **NEW!**

For decks or other exterior wood that require an eco-friendly removal of a previous finish, Gemini offers an ideal solution with **SAFE STRIP**, our powerful (non-toxic) remover that will cut through an existing finish to reveal the original wood. Once safe stripped your wood will be prepared wood to refinish like new!

For exterior wood that simply needs cleaning preparation for refinishing then our TWP® companion product series **RESTORE-A-DECK** is your right choice to finish with excellence! Restore-A-Deck is a two-part system that enables you to execute a powerful and eco-friendly restoration process. First **Restore-A-Deck Cleaner** deep cleans your wood, then **Restore-A-Deck Brightener** neutralizes the pH and significantly brightens the wood.

Once you have prepared your exterior wood project with the TWP® Companion Product Series the stain or finish you choose will look and last its very best!

- Concentrated, one container makes 5 gallons
- Prepares wood for any type of finish or re-coating
- Restores weathered wood to it's natural color
- Eco-Friendly

## REFINISHING YOUR EXTERIOR WOOD

### SAFE STRIP REMOVER & CLEANSER

Safe Strip is an eco-friendly 100% biodegradable product that is concentrated and one container makes up to 5 gallons

Safe Strip will prepare surfaces for any type of finish or re-coating and will restore wood to it's natural color

Safe Strip is your ideal choice to to clean your deck, house, concrete surfaces or prepare items for painting in an effective eco-friendly way!

## RESTORING YOUR EXTERIOR WOOD

**RESTORE-A-DECK** Cleanser & Brightener  
**EASY, two part restoration process!**

**STEP #1**  
**Restore-A-Deck Professional Grade Eco-Friendly Cleaner**

**STEP #2**  
**Restore-A-Deck Professional Grade Eco-Friendly Brightener**

### APPLICATION INSTRUCTIONS

**Step #1**  
Mix 6 oz. of Restore-A-Deck professional grade eco-friendly cleaner per gallon of warm water in a pump-up sprayer until all crystals have completely dissolved. For best agitation results, mix in a separate container first and transfer to pump sprayer. For wood where an existing finish needs to be removed we recommend Gemini Safe Strip remover be used prior to Restore-A-Deck cleansing and brightening. Coverage: Up to 1000 sq. ft.

**Step #2**  
Apply liberally to wood, completely wetting surface area so that material is flowing off of the surface, keeping the surface wet with solution for 15 minutes. If wood does not begin to turn back to its natural color, either increase strength by adding more crystals or in the case of moderate to extremely grayed wood, a stiff bristled scrub brush will remove the outer layer of grayed wood fiber, returning wood to its natural color.

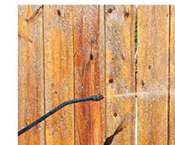

**Step #3**  
Using a garden hose (high pressure attachment is optional but is more efficient at rinsing the solution), thoroughly rinse surface of solution and loose wood fiber in preparation for Restore-A-Deck Brightener.

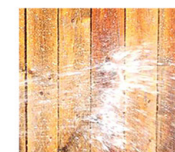

### APPLICATION INSTRUCTIONS

**Step #1**  
Mix 6 oz. of Restore-A-Deck professional grade eco-friendly brightener per gallon of warm water in a pump-up sprayer until all crystals have completely dissolved. For a five gallon mix simply pour entire container contents into a five-gallon pail and mix completely with five gallons of warm water. For best agitation results, mix in a separate container first and transfer to pump sprayer. Coverage: Up to 1000 sq. ft.

**Step #2**  
Apply brightener directly to surface with a pump-up sprayer and the wood will brighten or become lighter.

**Step #3**  
After the entire surface has been treated, simply rinse surface with a garden hose. Finished Product Let wood dry for 48 hours before applying a wood preservative or finishing product.
